

DD2 data collection

Primary data

From individuals in the DD2 cohort

DD2 enrollment

- DD2 Interview data
- Data from clinical examination at enrollment
- Blood and urine samples collected for storage in the DD2 biobank

Additional DD2 data derived from research studies*

Examples

- Analyses of biomarkers and genes from blood and urine samples in the DD2 biobank
- Data from follow-up questionnaires
- Data from intervention studies

Secondary data

From non-centralized data sources

External DD2 data*

Examples

- The Danish Diabetes Database for Adults
- The Danish National Podiatrist Registry
- The Danish National Archive

Individual record linkage on remote research servers

Centralized routine registry data available on remote research servers
